

When a Guest wants to Pay with Blackbird

Toast QSR

On Blackbird Terminal

1. After the guest checks in, their name appears with a unique 6-digit code: **BBXXXX** e.g. BB1234

On Toast POS

2. Rename the tab name to **BBXXXX**, the unique code for this guest

 **6-digit code must be entered correctly**
for your restaurant to get paid

 *Optional: Add the guest's name before or after the code*

e.g. **Ally BB1234** or **BB1234 Ally**

3. Place order as usual on Toast
4. Close to **Blackbird Pay** tender type
5. The guest tips as usual on Toast

On Blackbird Terminal

6. Click **Confirm** to close

Quick FAQs

When a guest asks about Blackbird, what do I say?

"We accept Blackbird, an app that rewards you with points (\$FLY) for dining out.

You can pay in the app and use your points like cash here and at other great restaurants in the Blackbird network."

The guest doesn't appear under "Open Tabs"

First, make sure they've added a valid credit/debit card to their account.

Then, ask them to check in again and tap "Yes" when prompted to pay with Blackbird.

The guest wants to pay with \$FLY

Make sure they have toggled on

Pay with \$FLY

from their check settings page.

If they accidentally charged their card instead, have them contact support@blackbird.xyz for help.

You don't know your PIN code

It defaults to the last 4 digits of the phone number linked to your Blackbird account.

If you don't have a Blackbird account, you won't have a PIN — use the manager PIN instead.

Do I need to do anything after entering the 6-digit code?

Yes — tap Confirm once the order is complete to clear from the open tab queue.

Can a code be used more than once?

No. Each code is one-time use. If the guest places another order, they'll need to check in again and you will see a new code for use.

Why doesn't the guest see a charge or \$FLY deduction yet?

Payments can take up to 24 hours to process and appear on their end.

Can I add a guest's name before or after the 6-digit code?

Yes. You may add the name (or other order notes) before or after the code, as long as there's a space before or after BBXXXX.
